# 🌍 Ireland ESG Emissions Tracker

1. Executive Summary | 2. Emissions Analysis | 3. Agriculture | 4. Renewable Energy | 5. 2030 Forecast

**53.75**
Latest Emissions 2024 (Mt $CO_2$)

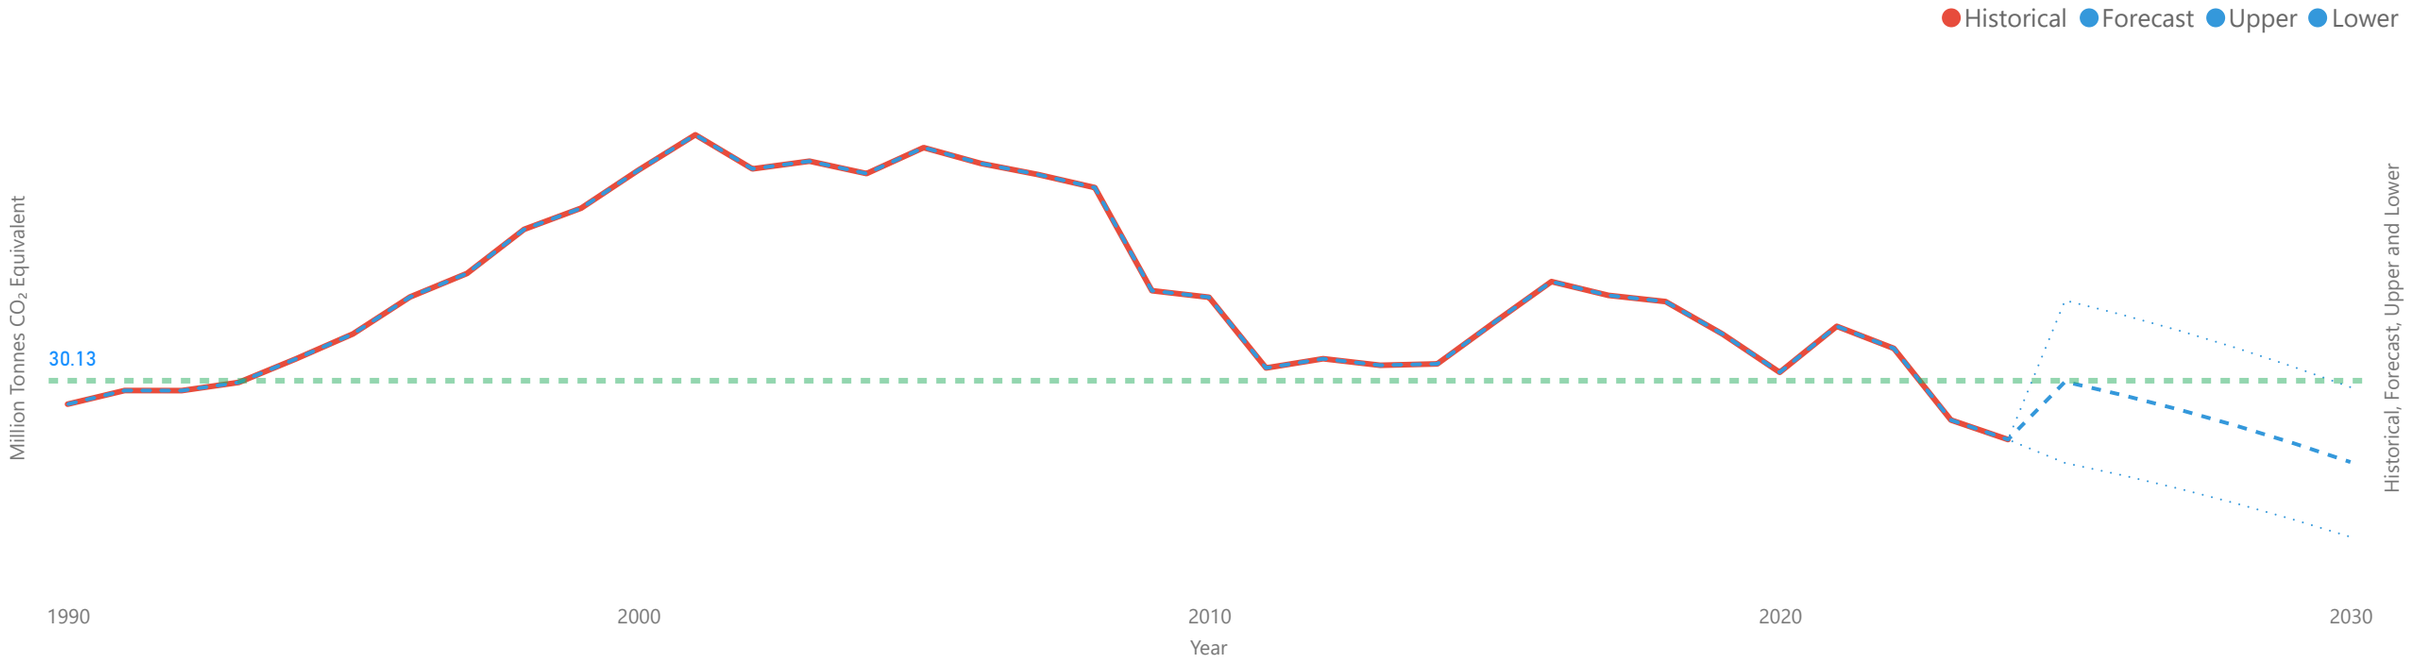
**12.60**
% Reduction Since 2018

**14.60**
Latest Renewable Pct

**23.62**
Mt Still To Cut By 2030

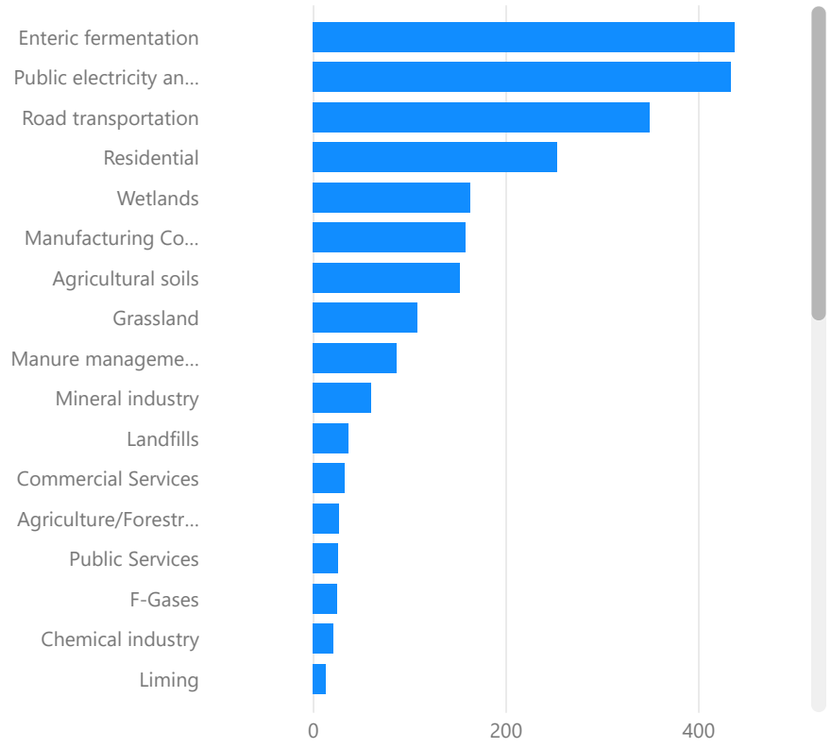
⚠️ Ireland is OFF TRACK for its 2030 Climate Action Plan target. Current emissions of 53.75 Mt must fall to 30.13 Mt by 2030 - requiring a further 23.62 Mt reduction in just 6 years.

## Ireland Total GHG Emissions (1990-2030)



# Emissions Analysis

Top Emitting Sectors



🐄 Enteric Fermentation (cow methane) is Ireland's single biggest emissions sub-sector at 17.89% of total - uniquely high vs EU average!

🐄 Enteric Fermentation (cow methane) is Ireland's single biggest emissions sub-sector at 17.89% of total - uniquely high vs EU average!

🐄 Enteric Fermentation (cow methane) is Ireland's single biggest emissions sub-sector at 17.89% of total - uniquely high vs EU average!

Filter by Year

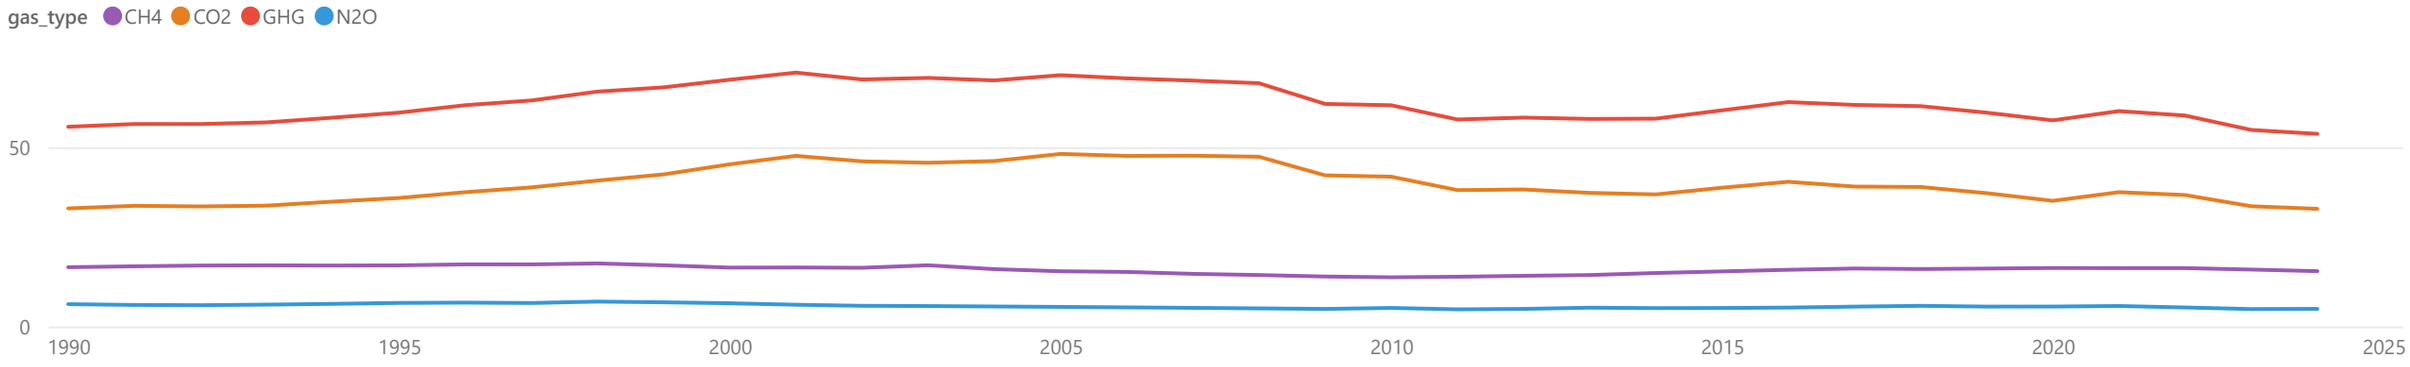
Emissions By Gas Type (1990-2024)

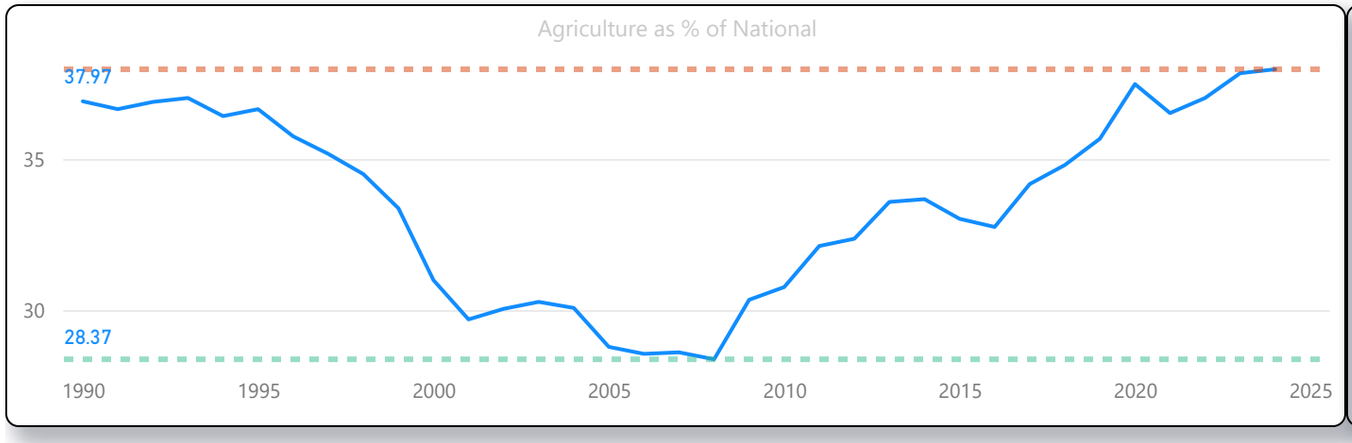


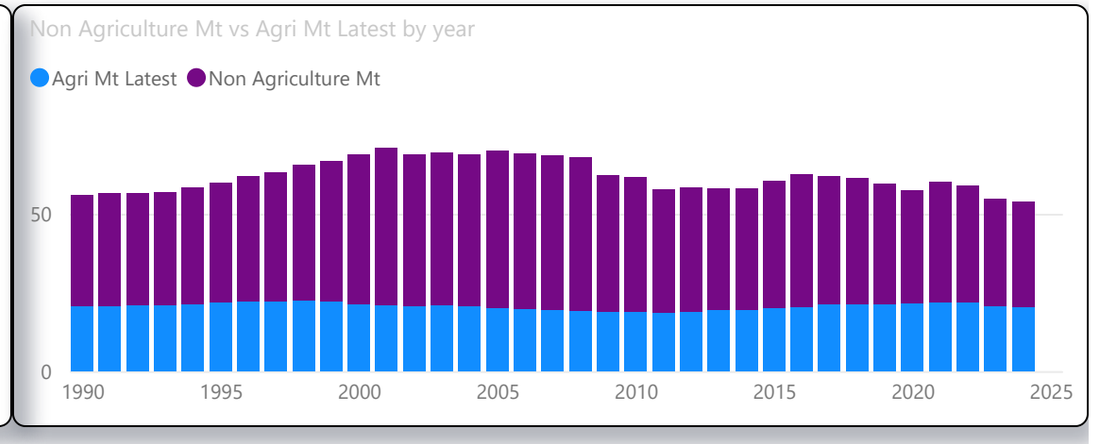
# 🐄 Agriculture - Ireland's Unique Challenge

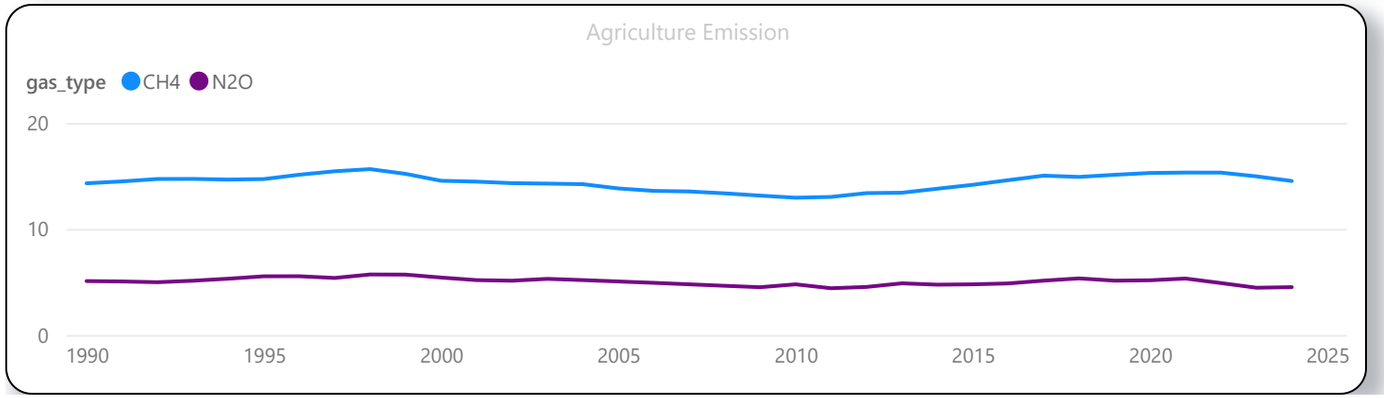
**37.97**
Agriculture % of Total Emissions 2024

**20.41**
Agriculture Emissions 2024 (Mt $CO_2$eq)

**-0.79**
% Change Since 1990





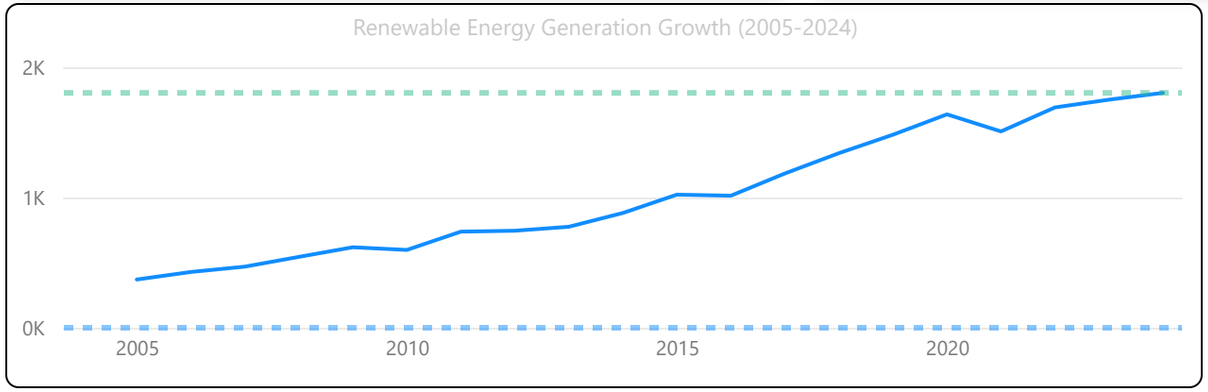


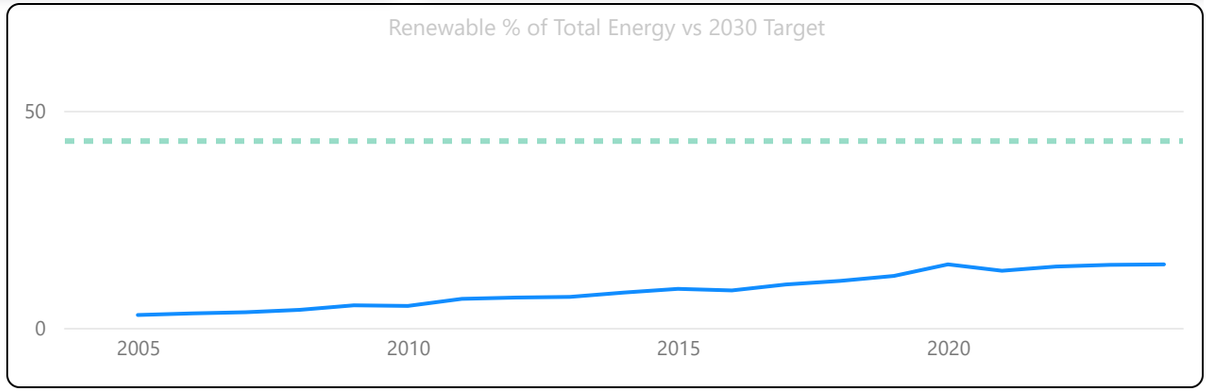
🚨 Zero Progress In 34 Years! Agriculture emissions in 2024 (20.41 Mt) virtually identical to 1990 (20.57 Mt)

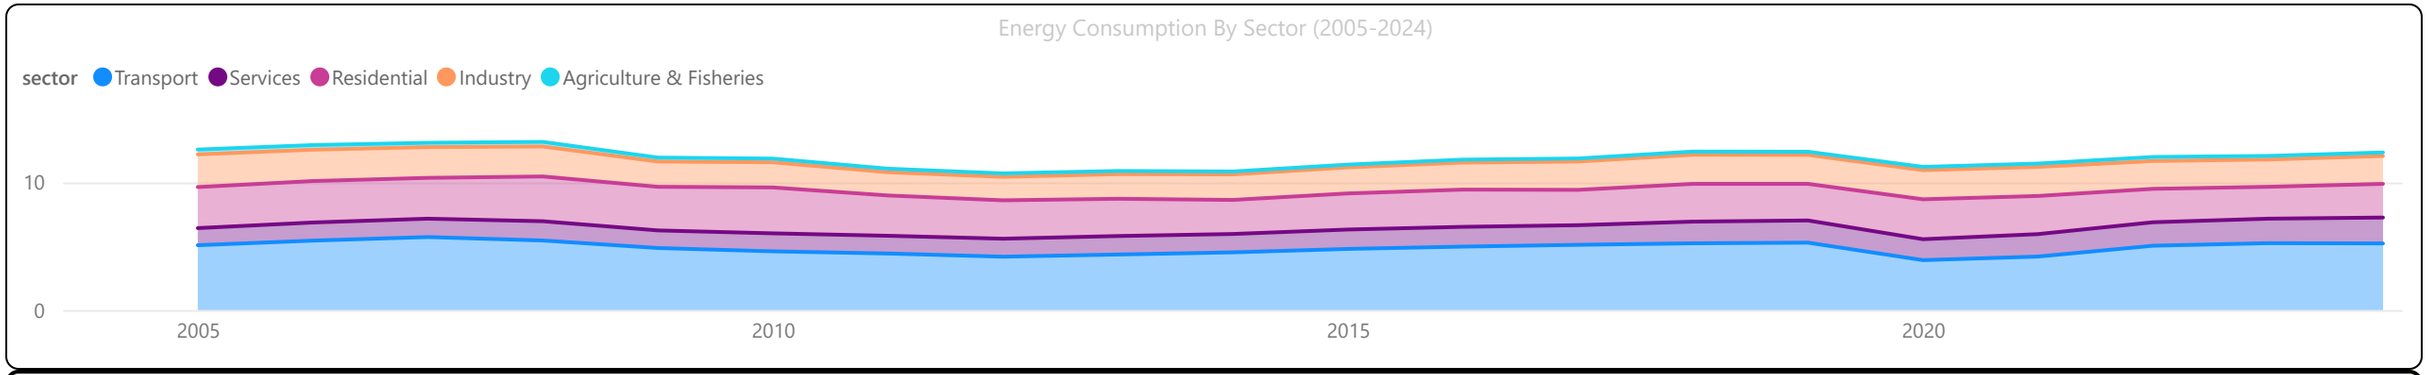
📈 Share At All Time High! Agriculture now 37.97% of total emissions - nearly 4x the EU average of ~10%

# Renewable Energy Progress

| 14.60 | 386.80 | 28.40 |
|---|---|---|
| Latest Renewable Pct | Renewable Growth Since 2005 | Gap To Renewable Target |



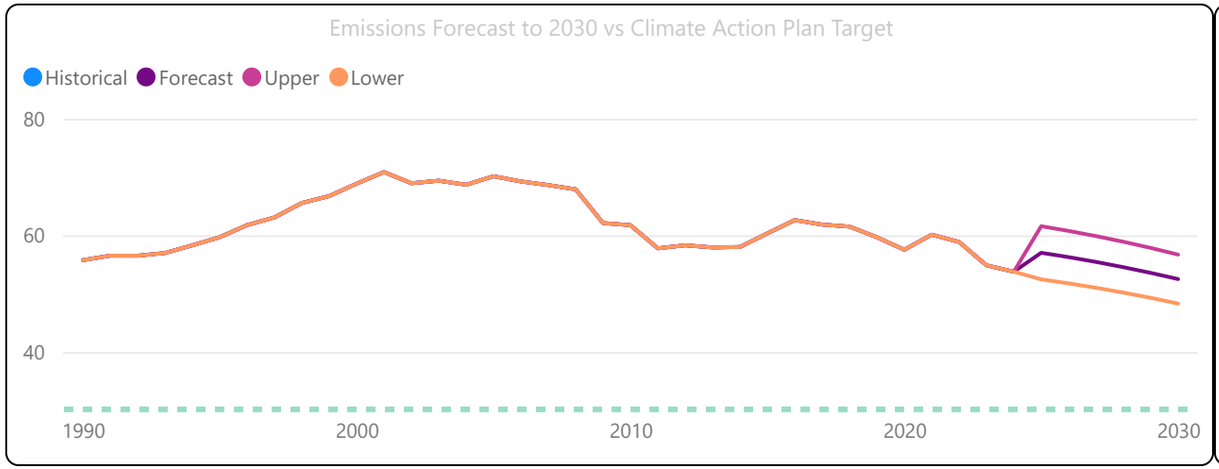


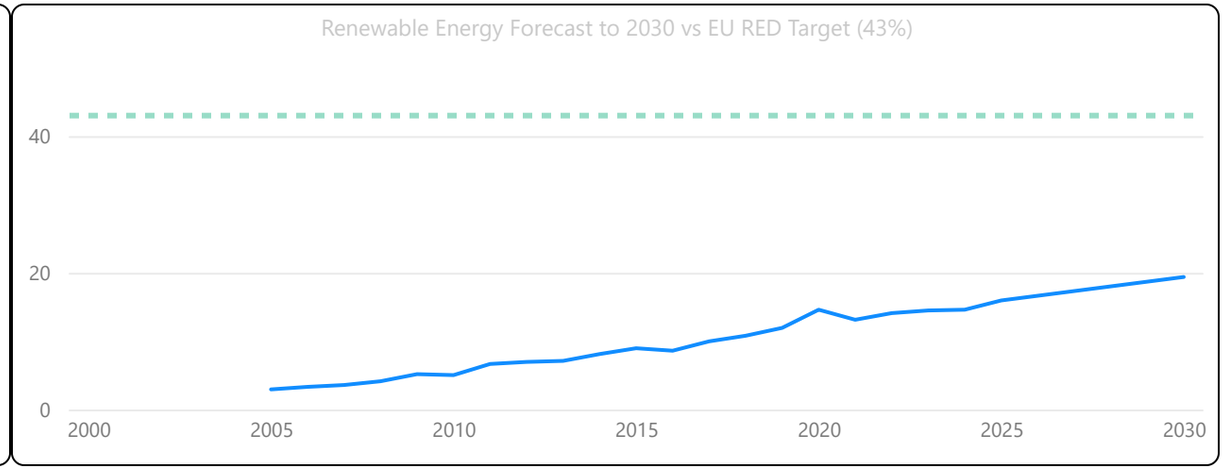


Data Centre Effect!Ireland's Services sector energy consumption grew 51% (2005-2024) driven by Big Tech data centres. Ireland now uses more electricity on data centres than urban homes!

# 🎯 2030 Target Tracker

| 52.49 | 22.36 | 19.39 | 23.61 |
|---|---|---|---|
| Forecast 2030 Emissions | Emissions Target Gap 2030 | Forecast 2030 Renewable | Renewable Target Gap 2030 |





| year | Forecasted_emissions_mt | Upper_bound_mt | Lower_bound_mt | Target_mt |
|---|---|---|---|---|
| 2025 | 57.00 | 61.56 | 52.44 | 30.13 |
| 2026 | 56.25 | 60.75 | 51.75 | 30.13 |
| 2027 | 55.43 | 59.86 | 50.99 | 30.13 |
| 2028 | 54.53 | 58.89 | 50.16 | 30.13 |
| 2029 | 53.55 | 57.83 | 49.26 | 30.13 |
| 2030 | 52.49 | 56.69 | 48.29 | 30.13 |

🔴 FORECAST: IRELAND WILL MISS BOTH 2030 TARGETS

Emissions: Forecast 52.49 Mt vs target 30.13 Mt (+22.36 Mt gap)
→ Need 3.5x faster reduction pace!

Renewables: Forecast 19.39% vs target 43.00% (-23.61% gap)
→ Growing 6.7x too slowly!

At current trajectory Ireland will not meet its legally binding Climate Action Plan 2030 targets.
